

TABLE OF CONTENTS

FOREWORD

1. J. R. MACDONALD LABORATORY PERSONNEL	1
2. INTRODUCTION	6
3. PROGRESS REPORT	
A. ATOMIC PHYSICS WITH HIGHLY CHARGED IONS – EXPERIMENT	7
A.1 Electron and X-ray Production in Ion-Atom Collisions	7
A.1.1 Double Differential Cross Sections for Ionization of Atomic Hydrogen and Helium by High Velocity, Highly Charged Ions	7
A.1.2 Low Velocity Collisions: COLTRIMS Measurements of Electron Spectra from Low Energy Ionization of Light Targets	13
A.1.3 High Velocity Collisions: Kinematically Complete Measurements of the Single Ionization of He by Fast Protons and Highly Charged Ions	17
A.1.4 Collective ECC Cusp in Many-Electron Continua in Strong Field Heavy Ion Collisions	20
A.1.5 Two-Electron Continua in Heavy Ion Collisions	26
A.1.6 X-Ray Emission from Ta ⁹⁺ (q=45-49) + Ar Collisions at Low Energies	33
A.1.7 Enhancement of Al-K and Molecular Orbital X-rays in Collisions of Low Energy Ne Ions with K-shell Vacancies	35
A.2 Electron-Ion Scattering – The Quasi-Free Electron Model	37
A.2.1 Elastic Scattering of Electrons from Ions	37
A.2.2 Inelastic Scattering of Electrons from Ions	44
A.2.3 Superelastic Scattering of Electrons from Metastable Ions	48
A.2.4 Elastic Scattering of Electrons from Metastable Ions – Formation of Triply Excited States	51
A.2.5 Kinematically Complete Differential Ionization Cross Sections for 2 keV Electron Impact Ionization of C ²⁺	53
A.3 Electron Capture and Transfer Ionization in Ion-Atom Collisions	55
A.3.1 COLTRIMS Measurements of Low Energy Capture from He	55
A.3.2 Low Energy Capture from Molecules: Electron Capture from D ₂ by Low Energy Xe ²⁶⁺ and Protons	58
A.3.3 Transfer Ionization to Single Capture Ratio for Fast Multiply Charged Ions on He	60
A.3.4 COLTRIMS with a Laser-Cooled Target	65
A.3.5 Charge Transfer in Extremely Slow Collisions between Highly Charged Ions and Helium	66
A.3.6 Collisions of Slow, Highly Charged Ions with Coherent Elliptical	

	State Rydberg Atoms: Electron Capture as a Function of Principal Quantum Number	69
A.3.7	Collisions of Slow, Highly Charged Ions with Coherent Elliptical State Rydberg Atoms: Impact Perpendicular to the Minor Axis	70
A.3.8	Coherent Elliptical State Rydberg Atoms: Dynamics in Crossed E and B Fields	71
A.3.9	Coherent Elliptical State Rydberg Atoms: Efficient Production Through the Use of Single Mode Diode Lasers	72
A.3.10	Ion-Rydberg Atom Collisions: Energy Transfer in Charge Exchange	73
A.4	Study of Molecular Systems	74
A.4.1	Ground State Dissociation of HD^+	74
A.4.2	One- and Two-Electron Processes in Ion-Hydrogen Molecule Collisions	83
A.4.3	Slow Ion-Molecule Collisions	87
A.4.4	Formation and Decay Mechanisms of Doubly Charged Molecular Ions	90
A.5	Ion-Surface Interactions	99
A.5.1	Energy and Charge Dependence of the Sputtering Induced by Highly Charged Xe Ions	99
A.5.2	Absolute Calibration of Electron Multipliers for Highly Charged Ions	105
A.5.3	Galileo Microchannel Plates as Detectors of Ions having Atomic Masses from 1 to 181, Charge States from 1 to 44 and Energy Range from 0.5 to 150 keV/q	109
A.5.4	Damage and Curing of a Multi-channel Plate (MCP) Detector Under Heavy Ion Bombardment	115
A.5.5	Correlation between Secondary Electron Emission Yields and Pulse Height Distributions from Multi-channel Plate (MCP) Particle Detector	117
A.6	Ion-Ion Collisions	119
A.6.1	Ion-Ion Collisions Involving Molecular Systems	119
A.7	Offsite Experiments	123
A.7.1	Double Photo-Ionization of He and D_2 by Single Photons	123
A.7.2	Triple Photo-Ionization of Lithium	126
A.7.3	Ion-Trap Studies of Negative Ions and Vibrationally Cold Molecular Ions	128
B.	ATOMIC PHYSICS WITH HIGHLY CHARGED IONS: THEORY	131
B.1	Ion-Atom Collision Theory	131
B.1.1	Solution of the Time-Dependent Schrödinger Equation in Momentum Space	131
B.1.2	Impact Velocity Dependence of Ejected Electron Momentum	

	Distributions for Proton-Hydrogen Collisions	134
B.1.3	Do $v/2$ Electrons Imply the Saddle Point Mechanism for Ion Impact Ionization of Atoms?	136
B.1.4	Impact Ionization of Helium by Antiprotons Below 40 keV	140
B.1.5	Electron Capture Cross Sections in Selected Collision Systems	142
B.1.6	Other Collaborative Projects	143
B.1.7	Atomic Structure Calculations: Radiative and Auger De-Excitation Of Hollow Calcium and Argon Atoms	144
B.2	Electron-Ion Scattering	145
B.3	Phase-Amplitude Method	147
B.4	Interactions of Ions with Surfaces, Thin Films, and Clusters	150
B.4.1	Charge Exchange in Ion-Surface Collisions	151
B.4.1.1	Close-Coupling Calculations for Non-Penetrating Ion-Surface Collisions	151
B.4.1.2	Influence of Static External Electric Fields on Charge Exchange and Resonance Formation	151
B.4.1.3	Extended <i>ab-initio</i> Close-Coupling Calculations for Bare Incident Ions Interacting with Metal Surfaces	152
B.4.1.4	Interactions of Ions with Thin Metallic Films	152
B.4.1.5	Classical Over-Barrier Simulations for Highly Charged Ions Interacting with Metal and Insulator Surfaces	152
B.4.1.6	Classical Over-Barrier Simulations Including Side-Feeding Processes	153
B.4.2	Soft Collisions Between Highly Charged Ions and C_{60}	154
B.4.2.1	Influence of the Target Dielectric Response on the Projectile Deflection	154
B.4.2.2	Simulation of Projectile Energy Gain Spectra	154
B.5	Atomic Theory of Strongly Correlated Systems	156
B.5.1	Overview	156
B.5.2	Hyperspherical Approach for Three-Electron Atoms	157
B.5.3	Proof of No $^4S^0$ Resonance in H^{2-}	159
B.5.4	Visualization of Electron Correlations in Intrashell Triply Excited States of Atoms	161
B.5.5	Other Projects Involving Atomic Systems	164
B.5.6	Weakly Bound Triatomic Molecules and Diatomic Molecular Anions	165
B.5.7	Bound States of Positrons with Li and Na	167
B.5.8	Charge Transfer in $D^+ + H(1s)$ and in $\mu^+ + H(1s)$ Reactions at Low Energies	169
B.5.9	Other Activities	172

C. FACILITIES OPERATION	173
C.1 Low Energy Ion Collision Facility	173
C.2 Laboratory Accelerators Operations Progress Report	180
C.3 Data Acquisition System, LINAC Computer Control, and JRML Electronics Shop	184
4. FINANCIAL REPORT	186
5. LIST OF PUBLICATIONS	187
